

Introducing the new

X-BOLT 2 SPEED RIFLE.

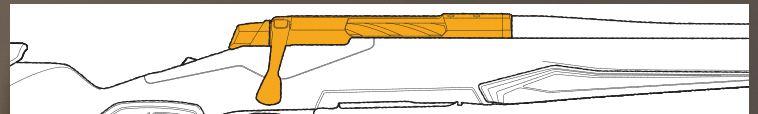

The interface between the rifle and the shooter is crucial for consistent, accurate shot placement. With the X-Bolt 2, Browning offers up an innovative, fully-adjustable stock that adapts to fit the individual, a new trigger, and a revised receiver and bolt. Together, these components aim to redefine Total Accuracy from a factory rifle the way that only Browning can.

The new Vari-Tech stock features 3-way adjustability. The comb can be raised to align the eye with optics. Internal spacers offer trouble-free length of pull adjustment. Interchangeable grip modules (vertical and sporter profiles) optimize finger to trigger reach. Rubber overmolding on the stock enhances grip in all conditions.

The new DLX trigger is a multiple lever design that provides a consistent and crisp trigger break with zero creep, zero take-up, and zero overtravel. Adjustable to 3 lb.

Added bolt guidance area in the new receiver promotes smoother bolt operation for effortless cycling and reliable feeding. The new bolt has improved ergonomics and styling.

**TOTAL ACCURACY.
REDEFINED.**
