ASK TEN GUN ENTHUSIASTS WHAT “BROWNING” MEANS TO THEM AND YOU WILL HEAR TEN DIFFERENT RESPONSES. THERE MAY BE A STORY ABOUT SHOOTING MALLARDS IN THE WORST WEATHER IMAGINABLE WITH GRANDPA’S AUTO-5. ONE MIGHT BE ABOUT A YEARNED-FOR CITORI EXPLAINED IN DETAIL FROM THE GRADE OF THE WOOD TO THE ENGRAVING ON THE THUMB LEVER. IF THE STORYTELLER IS A VETERAN, IT MIGHT BE A HARROWING TALE INVOLVING THE FIERCE M2 .50 CALIBER MACHINE GUN. THOUGH THE STORIES VARY GREATLY, THE REVERENCE GIVEN TO THE GUNS IN THE STORIES TOLD IS THE SAME. THANKS TO OVER 125 YEARS OF INNOVATION AND QUALITY, NO OTHER GUNMAKER HAS THE BRAND LOYALTY THAT BROWNING BOASTS.
The Standard Invector interchangeable choke tube system offers consistent, dense shot patterns with the constriction needed for the shooting situation.

The Standard Invector system is far more durable than the choke systems found in competitors' guns, especially with steel shot.

Standard Invector eliminates gases slipping between the choke tube and barrel that could damage the choke tube and the barrel.

Standard Invector is standard on 10, 16 and 28 gauge, and .410 bore Citori, Cynergy, Gold and BPS models.

See pages 50 through 53 for a complete line-up of Standard Invector choke tubes.

The Invector-Plus interchangeable choke tube system works with Vector Pro and back-boring to offer consistent, dense shot patterns with the constriction needed for the shooting situation.

The longer choke taper inside an Invector-Plus choke tube produces consistent patterns with more uniform densities and fewer flyers.

The Invector-Plus system is far more durable than the choke systems found in competitors' guns, especially with steel shot.

Invector-Plus eliminates gases slipping between the choke tube and barrel that could damage the choke tube and the barrel.

Invector-Plus is standard on 12 and 20 gauge Maxus, Citori, Cynergy, Silver, BPS and BT-99 models.

See pages 50 through 53 for a complete line-up of Invector-Plus choke tubes.

The competitor's choke tube is grooved and pitted after shooting 500 rounds with steel shot.

Browning's Invector-Plus choke tube is still flawless after 500 rounds with steel shot.

TECHNOLOGY

VECTOr PRO LENgTHENED FORCING CONE
- Lengthening forcing cones is a popular practice done to increase shot performance. It comes standard on A5, Maxus, BT-99 and 12 and 20 gauge Citori and Cynergy models.
- The Vector Pro design is better than the competitors’ forcing cone designs because it is longer with a more gradual taper.
- Back-boring increases bore diameter specifications to decrease friction between the shot cup and the bore to minimize shot deformation and maximize pattern uniformity, consistency and density.
- Vector Pro provides a more gradual constriction on the shot column for fewer deformed pellets. This produces more uniform patterns and keeps more pellets in the central part of the pattern.
- Vector Pro specifications are perfect. A larger bore diameter lets gases slip by the shot cup, resulting in reduced pellet velocity and blown patterns. A smaller diameter forcing cone can deform pellets, leading to flyers and poor ballistic performance.

STEEl SHOT PERFORMANCE
- Browning barrels meet the strictest material and construction quality standards to handle the punishment of steel shot.
- Barrel blanks are made from rolled and tempered steel bars and are stress relieved, then precision drilled, reamed and honed to exacting specifications.

BACK-BORED TECHNOLOGY FOR BETTER PATTERNING
- Back-boring reduces friction between the shot cup and the bore for increased shot pellet velocity, minimized pellet deformity for more uniform patterns and reduced felt recoil. It is standard on 12 and 20 gauge Browning Silver and BPS models.
- Browning back-bore specifications have been perfected and represent the ideal bore diameter needed to minimize shot deformation and maximize pattern uniformity, consistency and density.
- A larger bore diameter lets gases slip by the shot cup, resulting in reduced pellet velocity and blown patterns. A smaller diameter forcing cone can deform pellets, leading to flyers and poor ballistic performance.

STOck FInISHES
Dura-Touch® Armor Coating
- Dura-Touch® Armor Coating is extremely durable.
- Improves grip in wet and cold conditions.

MAXIMUM GRIP
- Mossy Oak® camo patterns are featured on all Browning shotguns.
- Ultra-realistic Mossy Oak patterns are developed to maximize concealment.

INFLEX TECHNOLOGY RECOIL PAd
- The original long-travel Inflex Technology recoil pad system (available on select models) provides a massive 25% decrease in felt recoil on 12 gauge guns and makes recoil virtually non-existent on small gauge guns.
- A slick Parylene coating prevents the pad from snagging on clothing and allows the recoil pad to remain soft.
- Three pad lengths are available in 1/2” increments to provide length of pull adjustment to fit a wide variety of shooters. See pages 24-25 for accessories.

INFLEX II TECHNOLOGY RECOIL PAd
- The Inflex II Technology recoil pad is made from a softer new outer material for the best recoil absorbing performance available.
- Internal directional deflection construction guides the comb down and away from your face for greater shooting comfort and faster, more accurate follow-up shots.
- The new pad material is super slippery to prevent snagging on your clothing when shouldering.
FIRE LITE MECHANICAL TRIGGER

- Exclusive mechanical trigger design.
- Unlike an inertia trigger, Fire Lite does not rely on recoil to set the next shot; instead, it offers immediate second shot capability.
- Features less take up, a crisp break and shorter overtravel.

Unlike other low-profile over and unders, the Citori 725 features a transverse-mounted, full-width tapered locking bolt and full-width hinge pin like other Citori models for maximum strength and longevity.

- The locking bolt engages a full-width tapered recess in the monoblock. Tapering the bolt and recess allows the bolt to seat deeper over time, accommodating for wear.

The Citori 725’s full-width hinge pin provides maximum strength and long-lasting endurance.

The competitor’s trunnions provide only a fraction of the bearing surface that the Citori 725’s full-width hinge pin provides.
THE NEW GENERATION OF PERFECTION.

THE POPULARITY OF THE BROWNING CITORI CAN’T BE DENIED. THESE ROBUST SHOTGUNS ARE QUICK HANDLING, LONG LASTING PERFORMERS WITH AN EYE ON STYLE AND BEAUTY. THOSE SAME QUALITIES CARRY INTO THE NEW CITORI 725.

THE LOW PROFILE RECEIVER MAKES IT FASTER TO POINT, LIGHTER TO CARRY AND CONTROLS RECOIL BETTER THAN EVER — ALL WITHOUT GIVING AWAY THE STRENGTH FOR WHICH THE CITORI IS RENOWNED.

THEIR REMARKABLE balancing and control abilities were further improved, allowing the new CITORI 725 to provide a comfortable, secure grip. The narrow smooth and wide smooth canted stock fits like an extension of the body.

Optimizing finger-to-trigger reach, hand eye coordination and pointability.

Incredibly balanced in the hands from pad to muzzle.

**REVERSE STRIKER MECHANICAL TRIGGER**
- The Reverse Striker is a striker-based, mechanical trigger system that does not use inertia to set the hammers.
- Reverse Striker offers the benefits of a crisp feel, reduced locktime and less overtravel than other over and under shotguns.
- Because inertia is not needed for the hammers to set, the design eliminates the possibility of the second barrel not firing.
- Cynergy target models are equipped with the Triple Trigger System, allowing finger to trigger length adjustment and the ability to switch between styles of trigger shoes: Wide checkered, narrow smooth or wide smooth canted.

---

**ADJUSTABLE COMB**
- Composite models include an integrated, adjustable comb system that allows the gun to be easily customized.
- Drop at comb adjustments are made in 1/8" increments.
- For cast on/cast off customizing, accessory combs are available on page 25.

---

**SUPERIOR GRIPPING SURFACES**
- Composite Cynergy models combine molded-in rubberized textured gripping surfaces.
- Proven Dura-Touch® Armor Coating adds a sure hold and a sleek feel in all climates and weather conditions.

---

**MONOLOCK HINGE**
- The strong MonoLock Hinge design is the engineering behind the Cynergy’s low profile receiver.
- Integrates the monobloc and the hinge for up to 300% more surface area to pivot on than traditional trunnion-style hinges.
- Rectangular locking pins provide extra strength and feature a “Wear-In Relief” that keeps the action tight.
- Jeweling adds a beautiful appearance, smoother function and improves durability.

---

**IMPACT EJECTORS**
- Impact Ejectors are aided by the punch of a secondary striker spring for positive, reliable ejection of fired hulls from the chambers.
- Unfired shells are elevated for easy removal.

---

**CHROME CHAMBERS**
- Cynergy shotguns feature hard chrome-plated chambers.
- Increased durability and corrosion resistance.

THE SOFTEST SHOOTING AUTOLOADER EVER
- Felt recoil is more than an instantaneous peak force; it is the total energy absorbing experience you feel when a shell is fired.
- The Power Drive Gas System, Inflex Technology recoil pad, back-boring and natural Browning balance combine to transfer up to 18% less total felt recoil force on your shoulder than other autoloaders on the market.

LIGHTNING TRIGGER
- The Lightning Trigger is the finest fire control system ever offered in an autoloading shotgun.
- Offers a smooth, crisp feel with minimal travel.
- Locktimes average .0052 seconds, 24% faster than the nearest competing autoloader.
- Easy to remove for cleaning.

- Extensive research has produced the most reliable gas piston design ever.
- The gas piston features larger exhaust ports that dump gases faster with heavy loads to control recoil.
- 20% longer piston stroke travel increases reliability with light loads.
- A patented, enclosed seal keeps residue out of the action for cleaner operation.

**TURNKEY MAGAZINE PLUG**
- The patented TurnKey Magazine Plug is easily removed in seconds using a car key.

**SPEED LOAD PLUS**

- Speed Unload feature makes emptying the magazine fast and easy, without chambering and ejecting every shell using the bolt handle.

**MAGAZINE CUT-OFF**
- The magazine cut-off (not available on Sporting and Deer models) allows the chamber to be unloaded to change loads without cycling a shell from the magazine.
- Useful when hunting different bird species and different loads are instantly required.

LESS RECOIL WITH THE ACTIVE VALVE

The self-adjusting Active Valve gas system in Silver autoloaders diverts gases from fired shells to operate the action instead of adding to recoil.

When shooting light loads, most of the gases operate the action.

With magnum loads, only a small amount of gas is necessary to operate the action, while the remaining gases are vented out the top of the forearm and away from the receiver for cleaner, more reliable operation.

Superior recoil reduction from the Active Valve means faster, more accurate follow-up shots and all-day shooting comfort regardless of the loads being fired.

• Extends beyond end of barrel for easy removal and even tighter patterns • Proprietary differential banded gas seal eliminates residue build up and makes chokes easy to remove and install • Integrated spring suspension holds the seal tight, yet allows expansion against the barrel wall for a perfect fit and a smooth transition for shot column entering choke • Gas is controlled at the interface between choke and where it seats in the bore • From Skeet to Full choke, patterns tighten consistently and reliably

TAILORED SHOT PATTERNS

• Gives you the shot pattern needed for the shooting situation at hand. • Invector-DS does this better than any of the competitions’ choke systems. • From Full to Skeet, the internal geometries of Invector-DS choke tubes have been tested again and again to ensure that patterns tighten consistently and reliably. • Invector-DS provides higher pattern percentages.

TOTAL ACCURACY AND PERFORMANCE.

The Browning X-Bolt is a perfect example of what happens when our designers flex their engineering and creative muscle. The X-Bolt gives you a ton of rifle performance in a lightweight package, with a host of innovative features that enable convenient operation and tack-driving accuracy, straight-from-the-box.

**X-BOLT**

**X-LOCK SCOPE MOUNTING SYSTEM**
- Securely mounted optics are essential for accuracy and precision on any rifle.
- X-Lock mounts feature a four screws per base design that replaces the traditional two screw system.
- Offers more accurate placement and more secure attachment to the receiver.

**FEATHER TRIGGER**
- For precise shooting there is absolutely no substitute for a crisp, predictable trigger.
- The X-Bolt’s three-lever Feather Trigger provides a clean, crisp pull with no take-up or creep and minimal overtravel.
- The trigger is screw adjustable from 3 to 5 lbs. and factory pre-set at approximately 3½ lbs.
- An alloy trigger housing contains hard chromed steel components that are highly polished on all critical contact surfaces.
- Does not rely on a secondary finger piece lever, the Feather Trigger was designed right, from the very start.

BOLT-ACTION

- 60° bolt lift cycles fast.
- Helps prevent banging your hand on the scope.
- Bolt incorporates a non-rotating sleeve that runs the full length of the bolt. When unlocked, three guide ribs on the bolt sleeve align with the three locking lugs to allow the bolt to slide smoothly. When locked, the three lugs provide massive bolt strength.
- The A-Bolt feeds smoothly because of its unique, patented cartridge depressor that stays in position, independent of the bolt rotation, as the bolt slides gently over the cartridges in the magazine.
- Recessed bolt face completely surrounding the cartridge base.

BEDDED ACTION AND FREE-FLOATED BARREL

- The A-Bolt barrel is free-floated by bedding the front and rear of the action for stability.
- Maintains barrel to stock spacing for consistent accuracy.
- The recessed muzzle crown helps protect the rifling from damage.
- Barrels are triple checked for interior finish, straightness and air-gauged for uniformity.

PERSONALIZED ENGRAVING ON THE A-BOLT

- The bolt can be personalized with your name. Call (800) 333-3288.

MAGAZINE

- Hinged floorplate with detachable box magazine makes it simple and fast to load a spare magazine.

THE BOSS DEVICE
- The Ballistic Optimizing Shooting System (BOSS) is designed to maximize accuracy from the A-Bolt.
- The BOSS device quickly and easily tunes barrel harmonics to precisely match the specific ammunition fired, resulting in amazingly tight groups. The BOSS device is available as an option on the Medallion, Composite Stalker, Stainless Stalker, M-1000 Eclipse and Stainless M-1000 Eclipse.

BOSS-CR ACCESSORY
- This accessory is also included with all BOSS-equipped A-Bolt rifles and offers all the accuracy advantages of the original BOSS without the muzzle brake feature.
The BOSS-CR accessory offers all the accuracy and tunable advantages of the original BOSS device without the muzzle brake feature. By simply replacing the original BOSS forward weight and recoil reduction components with the one-piece, no-hole BOSS-CR accessory, only the reduced recoil of the original BOSS is sacrificed. The BOSS-CR accessory is designed to fit only BAR Mark II and A-Bolt centerfire rifles previously factory-fitted with the BOSS.

BOSS-CR ACCESSORY

- Hinged floorplate with detachable box magazine makes it simple and fast to load a spare magazine.

MAGAZINE CAPACITY

- Magnum calibers: Three in magazine, one in chamber. Standard calibers: Four in magazine, one in chamber. 223 Rem.: Five in magazine, one in chamber.

TAKEDOWN FEATURES
- BLR Takedown models are just as accurate and reliable as their unified counterparts but much easier to transport and store.
- The rifle is easily and quickly assembled by simply sliding the barrel half into the receiver half and locking them together with the flip of a lever. The lever mechanically engages a stout locking lug into a recess in the bottom of the receiver. The system is rugged, precise and blends seamlessly into the styling of the rifle.

HAMMER
- The folding hammer provides an added measure of safety when the hammer is at half-cock.
- The fold-down hammer has two positions at half-cock so the status of the rifle is readily seen; and four basic positions: Full-cock, half-cock, folded hammer position and the dropped, or fired position.

SCOPE MOUNTS
- A scout-style scope mount is available as an accessory for BLR Takedown models. This one-piece alloy base mounts forward of the receiver and stays attached to the barrel half of the rifle when disassembled to retain the scope's zero. A long eye-relief scope is required (not included).
- The receiver is also drilled and tapped for conventional scope bases and rings (not included). Three scout-style scope mounts are available for BLR Scout models, depending on the caliber (see chart below).

MAGAZINE
- The flush-mounted detachable box magazine has a capacity of three magnum or four standard rounds in the magazine, plus one in the chamber.

MAXIMUM GRIP
- Camo composite BAR models combine overmolded gripping surfaces and Dura-Touch Armor Coating for a sure hold and a sleek feel in all climate conditions.

ADJUSTABLE SHIM SYSTEM
- ShortTrac and LongTrac BAR rifles include six shims that customize drop at comb and cast on/off.

THE BOSS DEVICE
- The Ballistic Optimizing Shooting System (BOSS) is designed to maximize accuracy.
- The BOSS device quickly and easily tunes barrel harmonics to precisely match the specific ammunition fired, resulting in amazingly tight groups. The BOSS device is available as an option on the BAR Mark II Safari.

BOSS-CR ACCESSORY
- This accessory is also included and offers all the accuracy advantages of the original BOSS without the muzzle brake feature.

RECEIVER
- The BAR MKII Safari uses a blued one-piece ordnance steel receiver with scroll engraving. ShortTrac and LongTrac models have an aircraft-grade aluminum alloy receiver.
- All BAR rifles are drilled and tapped for scope mounts. The bolt release lever is incorporated into the receiver.

INTEGRATED SCOPE MOUNT SYSTEM

- Integrated Scope Mount Systems utilize the ring and base into a single, ultra-rigid unit.
- Mached from 7000 series aluminum.
- Eliminates alignment problems and the possibility of a loose connection between bases and rings.

SCOPE BASES

- Browning Scope Bases are machined from solid steel.
- Double recoil shoulder design holds rings securely, even under magnum recoil.
- T-Bolt two-piece and SA-22 one-piece base designs are alloy and only compatible with Browning rimfire rings (Code 123665).
- Compatible only with Browning Scope Rings below.
- Maxus, Gold, Silver, BPS and Buck Mark bases are Weaver-type bases and are not compatible with Browning rings.
- BLR Takedown bases are Weaver-type, one-piece scout-style bases for a long eye-relief scope and are not compatible with Browning rings.

SCOPE RINGS

- Ultra-rigid vertically split rings use oversize hardware for extra strength and ease of installation.
- Standard, Intermediate and High rings are available for both 1" and 30mm diameter scopes.
- Compatible with the two-piece Scope Bases for A-Bolt, BAR, BLR shown above and the X-Lock bases for X-Bolt rifles shown at the right.

**THE HEIGHT IS DETERMINED BY MEASURING FROM THE TOP OF THE BASE TO THE BOTTOM OF THE SCOPE RING.**

SAFES

REFINEMENT IS WHAT REALLY SEPARATES BROWNING PROSTEEL SAFES FROM THE REST. BROWNING AND PROSTEEL HAVE BEEN BUILDING SAFES FOR MORE THAN 30 YEARS, AND IMPROVING THEM EVERY STEP OF THE WAY. WHETHER IT’S MORE MODELS AND COLORS TO SELECT FROM, HIGHER BUILD QUALITY OR THE FINEST, MOST ADAPTABLE INTERIOR LAYOUTS AVAILABLE ANYWHERE, THE ATTENTION TO DETAIL AND REFINEMENT FOUND IN A BROWNING PROSTEEL SAFE ARE SECOND TO NONE.
AXIS ADJUSTABLE SHELVING – THE MOST VERSATILE SAFE INTERIOR EVER DESIGNED. PERIOD.

- Browning ProSteel safes lead the industry when it comes to safe interior storage.
- The exclusive Axis Adjustable Shelving (U.S. patent #D662341) is a completely customizable system with an array of shelves that can be configured to meet virtually every need.
- Unlike shelves in our competitors’ safes that are either fixed in position or only offer vertical adjustment, Axis shelves can be adjusted up and down, side to side, added and removed to accommodate items over a broad range of sizes.
- Axis maximizes interior storage of long guns, handguns and other valuables.
- Six different, specific shelves and accessories are available as options (see page 121) to further customize the interior to meet specific needs.
- Shelves are clad in a soft, protective polymer skin to protect valuables and firearms.

AXIS STEEL SHELVING
- Axis steel shelving is made from a single piece of sturdy steel.
- The polymer coating is highly durable and designed to protect your guns and valuables. It also adds a sleek appearance to the safe interior.
- Axis accessories are designed to easily mount to the solid steel shelf or barrel rack. (They are compatible with Axis adjustable shelves in 2013.)

PISTOL RACK*
- With five handgun capacity, the pistol rack stores its cargo under the shelf.

BARREL RACK
- 11 slots for long guns.
- The barrel rack can be raised or lowered to accommodate long guns, shotguns, carbines and modern sporting rifles.

FILE BOX*
- Stores, protects and organizes your important documents.

DRAWER*
- The sturdy drawer is perfect for all sorts of smaller goods that need to be organized.

JEWELRY BOX*
- Keep delicate jewelry in its rightful place where it is easy to find and protected from other items going in and out of the safe.

* These accessories must be mounted to a solid steel shelf or barrel rack.

DPX - KEEP THINGS ORGANIZED
- The patented DPX storage system (U.S. patent #7,409,790) is exclusively available on Browning ProSteel safes.
- This unequalled organizational tool allows you to store long guns, handguns, shooting gear and more on the back of the safe door.
- The DPX gun rack allows as much as 30% more long gun capacity inside the safe, and makes the guns on the door easy to access.
- The Scope Saver increases storage and protects optics.
- DPX pouches and pockets hold valuables and gear where they are easy to find and free up shelf space for even more stuff.

DPX HANDGUN POUCHES
The military-style MOLLE system straps on the DPX panel allow handgun pouches to be placed virtually anywhere.

MESH POCKETS
See-through mesh pockets hold smaller items and make valuables fast and easy to locate visually.

DPX SCOPE SAVER
Store long guns with optics on the DPX door rack with the Scope Saver. The recessed panel protects scopes and increases gun capacity.

THE QUICK ACCESS DPX BARREL RACK
Flexible polymer wings protect the barrel finish, secure the barrel in place and allow firearms to easily be pushed into or pulled from the rack. (U.S. patent #D643500)
STANDARDIZED INTERIOR DIMENSIONS

- Every Premium safe (Platinum Plus, Gold, Medallion and Silver) interior falls into one of the four standardized dimensions shown below.
- In order to fit additional layers of fire protection that, up until now, would have used interior storage space, exterior safe dimensions have grown to accommodate the additional insulating material in the walls.

SAFE CAPACITY

- Safety Capacity is a series of three numbers, for example 11/22+7 for a 26 cubic foot safe.
- The first number is the long gun capacity in the safe body with a Half Shelf Interior (11 in the example).
- The second number is the long gun capacity in the safe body with an All Gun Interior (22 in the example).
- The "plus" number is the long gun capacity on the back of the door (+7 in the example).
- Total capacity grows up to 30% in the Half Shelf configuration because there is a full rack of long guns on the door back.
- "Fast Access Guns" increase in both Half Shelf and All Gun configurations. These guns are defined as those that are on the front row of the safe body and the door gun rack.

HOW DO BROWNING PROSTEEL SAFES HOLD 30% MORE LONG GUNS?

- The amount of insulation is the most important factor. More insulation means more protection. (It really is that simple.)
- The construction of the safe is hugely important. Thicker steel, fully welded gap-free body construction and reinforced door frames all reduce heat-caused flex that could open gaps in the safe and allow heat to enter the safe. Strategic placement of insulation and external hinges means there are no gaps in fire insulation for improved protection.
- All Browning ProSteel safes include a Palusol® strip that expands to seal around the door frame and eliminate gaps where heat could enter.

GUN SAFE WARRANTY

- ProSteel provides a Gun Safe Warranty that is equal to the best in the industry on safes manufactured after January 1, 2006. The warranty covers:
  - ATTEMPTED BREAK IN
  - FIRE
  - BREAK IN

If a safe is involved in one of the above situations and your homeowner's insurance policy does not cover the damage to the safe, ProSteel will repair or replace the safe. (Safe contents are not covered.) Shipping costs for a new safe, if necessary, are included. Some restrictions apply. See Safe Owner's Manual or browning.com for complete warranty information.

SAFES

BROWNING.COM

FORCE DEFLCTOR SYSTEM
- The patented, class-leading Force Deflector Locking System prevents energy transfer to the lock better than many systems found on safes costing much more.
- This simple, innovative design uses a rotating cam to prevent forces on the bolt or handle from reaching the lock.

LOCKING BOLTS
- Bigger locking bolts, and more of them, equal better security as larger diameter locking bolts are much less likely to bend than smaller bolts.

HARDENED STEEL PINS
- Hardened steel pin lock protection is designed to combat drill attacks.
- Located directly in front of the locking mechanism, the smooth, hardened steel pins are extremely difficult to drill through. Unlike steel plate protection, the pins rotate freely and are more likely to bend or break drill bits.

RELOCKER
- The Force Deflector™ Locking System includes a relocker that is triggered during an attack on the safe.
- The relocker secures the boltwork in the safe and prevents it from being actuated.

1” FORMED DOOR
- The 1” Formed Door is engineered with a rugged steel face and reinforcement panels to provide excellent strength and attack protection compared to the competition.

POWDER COATED FINISH
- Browning ProSteel Value safes are powder coated for professional, even coverage, then baked to harden the finish.
- The attractive, durable textured finish is chip and scratch resistant.

PRY-STOP END BOLTS
- Pry-Stop End Bolts are more than double the length of standard bolts and are attached to high-strength steel angle iron that prevents the locking bolt support bar from bending in a pry attack.
- The top and bottom locking bolts help secure the door corners.

SOME PEOPLE MIGHT THINK A “VALUE” SAFE MEANS SOME CORNERS HAVE BEEN CUT IN THE DESIGN AND MANUFACTURING, AND IT WON’T BE ABLE TO PROVIDE ENOUGH PROTECTION WHEN THE GOING GETS TOUGH. WITH A VALUE PROSTEEL SAFE FROM BROWNING, YOU CAN BE ASSURED OUR SAFE WILL PROVIDE PLENTY OF SERIOUS SECURITY FOR YOUR GUNS AND OTHER IMPORTANT VALUABLES.

RUSS KOMMER

For nearly 30 years Russ Kommer has earned his living as a highly respected big game hunting guide in Idaho and the wilds of Alaska. The work of a guide doesn’t end with leading clients to trophy game animals; it starts there. Once an animal is on the ground the real work begins. Over the years Russ used many knives to dress and skin countless animals, yet found each knife lacking in performance. He drew upon his wealth of hands-on experience and started designing and producing his own knives. It turned out that Russ had a knack for this art and has become a talented, award-winning knifemaker. What started as a hobby and the search for a better blade has led to numerous best-in-show awards. Russ creates and personally field tests his designs to ensure they meet the toughest standards — his own. Browning is honored to team with Russ to produce many of the knives throughout this catalog.

HOW TO CHOOSE A FLASHLIGHT

BROWNING IS A LEADING MANUFACTURER OF PORTABLE BATTERY-POWERED LIGHTING FOR HUNTERS AND SHOOTERS WITH MORE THAN 50 STYLES IN OUR PRODUCT LINE. TO CHOOSE THE BEST LIGHT, READ ON.

SIZE, WEIGHT AND POWER
When choosing a light, smaller, brighter and lighter are better. Today’s high-output LEDs from manufacturers like Luxeon® and Cree® are so powerful and efficient they achieve the same light output as the old multi-cell C and D lights. The super bright Alpha and Alpha Max flashlights use a single AA battery yet are not much bigger than a shotgun shell.

LED VS. XENON BULBS
LEDs are preferred over Xenon bulbs for most uses, thus all Browning lights are now LED designs. LEDs use batteries more efficiently, illuminate at greater distances, emit a clean, even beam and will never burn out under normal use. Like most technology, LEDs keep getting better every year. For 2013 many of our lights offer upgraded LEDs with 15% - 50% more output.

HAND-HELD OR HANDS-FREE
Headlamps and cap lights allow the use of both hands for tasks like dressing a deer, fixing a truck or finding a path through the woods. Modern technology makes many headlamps as powerful as larger hand-held flashlights. Several headlamps, such as MicroBlast and Phantom can be worn either as a headlamp, clipped a shirt pocket or to the brim of a hat.

LONG RUN TIME
By using advanced digital circuitry, highly efficient LEDs and low-resistance switches, we are able to offer extra long run times on many lights. Most Tactical Hunter lights will run for 20-60 hours on the low setting. These extended run times could be the difference between you getting home safely and having to spend the night in the woods.

WATERPROOF AND SUBMERSIBLE
Because the great outdoors doesn’t always have great weather, we have redesigned several flashlights to be waterproof and submersible to 3 feet for 30 minutes (ANSI IPX7). Most of our other flashlights are O-ring sealed for greater water-resistance (IPX4). The new High Noon LED Spotlight is submersible and it floats.

BATTERIES
Lithium batteries are used in many of our highest-performing lights, such as Hunt Master and Nitro. Lithium batteries can pack twice the power of alkaline batteries for their weight, and operate well at very cold temperatures. Other lights in our line use AA and AAA alkaline batteries because they cost less than lithium and are readily available anywhere in the world. The latest integrated circuit designs in Browning’s Pro Hunter, Chaos and Alpha flashlights allow alkaline batteries to approach the performance of lithium batteries.

SWITCH SETTINGS
Multiple switch settings (high, low and in-between) help preserve battery life and allow selection of colors and flashing options. The lock-out switches found on most of our lights keep the light from accidentally turning on in a pack or pocket. A disorienting Fast Strobe setting is now available on many Browning lights, and it has proven to be useful for self-protection and for signaling during an emergency.

RED, GREEN AND BLUE
Colored LEDs help preserve night vision and are great for map reading. They are less obvious than white light to many types of game animals.

ANSI FL-1 PERFORMANCE STANDARDS
We proudly participate in the ANSI FL-1 standards for measuring and stating performance claims for all portable lights. This includes Brightness (Lumens), Distance, Run Time, Water-Resistance, and Impact-Resistance. ANSI FL-1 provides the only reliable apples-to-apples comparison between models and is used by most major manufacturers. Look for these ANSI symbols on Browning light packaging.*

LUMENS = BRIGHTNESS
The output of a traditional 2D cell flashlight is approximately 15 - 20 lumens. The latest LED flashlights can have an output of more than 500 lumens.

BATTERY LIFE
Battery Life (Run Time) is defined as the time elapsed from when the batteries are new to when the light reaches 10% of the original brightness.

MAXIMUM DISTANCE
Maximum Distance is measured as the distance from the light source to where it decreases in brightness to 0.25 lux — about the brightness of the full moon on a clear night.

WATER-RESISTANCE
Water-Resistance (ANSI Standard IPX4) is tested by spraying water onto the light from multiple directions. This simulates a heavy, all-day rain.

WATERPROOF AND SUBMERSIBLE TESTING
Waterproof and Submersible Testing (ANSI Standard IPX7) assures water cannot get inside the light. This testing is conducted for 30 minutes at a water depth of 1 meter (about 39”).

IMPACT-RESISTANCE
Impact-Resistance (ANSI Standard 1M) measures how well the light resists damage when dropped repeatedly from a height of 1 meter (about 39”) onto concrete.

- Introduced in 2005 to meet the demands of hunters who were tired of getting wet during adverse weather conditions.
- Pre-Vent is used in 2-layer, 2.5-layer and 3-layer jackets, pants and gloves to meet different weather conditions.

**YKK® AQUAGUARD® ZIPPER TECHNOLOGY.**
- Zippers are usually the last thing you think about when buying a hunting parka. When designing a parka, however, it is one of the first. For 2013, YKK® Aquaguard® zippers are featured on many Browning parkas and jackets.

**RECOIL PROTECTION**
REACTAR G2 PAD WITH IMPACT GEL™ FOR BETTER PERFORMANCE.
- The REACTAR G2 pad features a totally new, ultra-flexible recoil absorption material called Impact Gel™ that absorbs recoil forces better than any other pad on the market.
- The REACTAR G2 pad is only 8mm thick so it doesn't change your length of pull or point of aim.
- Increase comfort and reduce fatigue with a "Made in the USA" REACTAR G2 pad.

**HMX BI-COMPONENT WATERPROOF BREATHABLE FABRIC TECHNOLOGY IS HERE.**
- Industry leading Bi-Component HMX fabric is different because it combines the advantages of the two most widely used waterproof and breathable technologies: Hydrophilic Monolithic and Hydrophobic Microporous.
- Hydrophilic Monolithic systems do not transport perspiration vapor, but only the liquid perspiration formed when the vapor condenses.
- Hydrophobic Microporous systems transport vapor, but do not transport condensed perspiration.
- Bi-Component HMX takes advantage of both technologies to move both water vapor and condensed water to the outside of the garment to protect from internal moisture and totally prevent water entry from the outside.

**PRIMALOFT®**
PRIMALOFT keeps you warm, whether it's wet or dry.
- A) Wicks moisture away.
- B) Pumps away perspiration.

CAMOUFLAGE

MODERN CLOTHING ITEMS ARE OFFERED IN REALTREE® AND MOSSY OAK® CAMO.

- Realtree and Mossy Oak represent the backbone of the hunting camo market, and now the most popular Browning clothing items are available in patterns from both companies. This gives you the pattern that matches the other outdoor gear you have or plan to buy. No matter when and where you hunt, we have the gear you need in the camo pattern you want.

ODORSMART CONTROLS ODORS BEFORE THEY BECOME A PROBLEM.

- Human odor is caused by bacteria that thrive on your skin. The bacteria's waste produces odors that are detected by deer and other big game animals.
- OdorSmart attacks the bacteria on the skin and in the “microclimate” immediately around the skin, helping to kill the bacteria BEFORE odors develop.
- OdorSmart will last for the life of the garment with normal use and care, and does not require recharging or special cleansers. Just wash OdorSmart items as instructed on the care label.
- OdorSmart technology is available in Browning base layers, in lining materials where it inhibits the growth of bacteria, and also in insulations where it attracts and neutralizes odor-causing bacteria in the structure of the insulation thus keeping it off the skin. The combination of OdorSmart in base layer, linings and insulation provides you with multiple layers of defense against odor.

NO MORE COLD HANDS!

- Cold hands are often caused by moisture collecting between the outer shell of the glove and the interior waterproof liner. It's just like inserting a small plastic bag inside a larger bag, then filling the space between the two bags with ice water. Your hand is dry, but your fingers get cold.
- The revolutionary OutDry® membrane lamination process eliminates the space between the outer shell fabric and the inner waterproof liner so there's no place for chilling moisture to collect.
- The waterproof liner is fused to the inside surface of the fabric shell, eliminating torn or loose fitting liners, soggy gloves and cold fingers.
- This unique construction also offers a sleeker fit and improved finger dexterity.

OUTDRY® TECHNOLOGY

A. Shell  B. Membrane  C. Sweat  D. Trapped sweat  E. Absorbed water

OUTDRY® is a revolutionary membrane lamination process that eliminates moisture collection between the outer shell fabric and the inner waterproof liner. This keeps your hand dry and your fingers warm.

ENGINEERED PERFORMANCE.

If you have spent any time at all hunkered down in a muddy pit blind or standing in the rain with your back to a Cyprus tree, you know the importance of warm, dry and reliable waterfowl clothing. So do we. Take a gander at Dirty Bird and see the features you’ve been missing.
RAGLAN SLEEVES
- Raglan sleeves are cut at a long tapering angle right up to the collar line.
- The top of the sleeve becomes one seamless piece of fabric all along the shoulder with no exposed seams to leak, even in the worst downpours.

ARROW GUSSETS
- The Arrow Gusset armpit design has a smooth, tapering shape as it rises along the side to under the sleeve.
- Offers you a better fit, enhanced range of movement and no binding.

VARI-TECH GARMENT CONSTRUCTION (Product shown on page 227)

PRE-VENT, FOR SUPERIOR WATERPROOF, WINDPROOF AND BREATHABLE PERFORMANCE.
- Pre-Vent is our go-to waterproof, windproof, breathable fabric.
- Pre-Vent keeps out rain, snow, and wind while breathing away perspiration to keep you warmer and drier.
- Introduced in 2005 to meet the demands of hunters who were tired of getting wet during adverse weather conditions.
- Pre-Vent is used in 2-layer and 3-layer jackets, pants, and gloves to meet different weather conditions.
