Selecting the Right Browning Lighting

When it comes to portable battery-powered lighting for hunters and shooters the brightest solutions come from Browning. With plenty of choices in our product line you’ll find a light that’s ideal for every need.

SIZE, WEIGHT AND POWER

When choosing a light, smaller, lighter and brighter are better. Today’s high-output LEDs are so powerful and efficient they achieve the same light output as the old multi-cell C and D lights. The Trak USB keychain light is no bigger than a magnesium pilon cartridge, yet it shines with a powerful 121 lumens.

LED VS. XENON BULBS

LEDs are preferred over traditional Xenon bulbs for most uses, thus all of our lights are now LED designs. LEDs use batteries more efficiently, illuminate at greater distances, emit a clean, even beam and will never burn out under normal use. Like most technology, LEDs keep getting better every year. For 2019 several of our lights offer upgraded LEDs with 15% - 100% more output.

HAND HELD OR HANDS FREE

Headlamps and cap lights allow the use of both hands for tasks like dressing a deer, fixing a truck or finding a path in the woods. Modern technology makes many headlamps as powerful as larger hand-held flashlights. The Blackout 6V headlamp puts out 860 lumens and is brighter than at all three of our Browning hand-held flashlights.

LONG RUN TIME

By using advanced digital circuitry, highly efficient LEDs and low-resistance switches, we are able to offer extra long run times on many lights. Many flashlights and headlamps will run for 20-48 hours on the low setting. The High Noon 3C spotlight will run for 4 days at the low setting. These extended run times could be the difference between getting home safely or spending a night in the woods.

WATERPROOF AND SUBMERSIBLE

Because the great outdoors doesn’t always have great weather, we have redesigned most of our lights to be waterproof and submersible to 3 feet for 30 minutes (ANSI IPX7). Most of our other lights are O-ring sealed for greater water resistance (IPX4). The High Noon LED spotlight is submersible and 6 foot.

BATTERIES

Lithium batteries are used in many of our highest-performing lights, such as the Kingpin, Rackus lantern and High Noon Rechargeable spotlight. Lithium batteries pack twice the power of alkaline batteries for their weight, and operate well at very cold temperatures. Other lights in our line use AA and AAA alkaline batteries because they cost less than lithium and are readily available anywhere in the world. The latest Lithium-ion (Li-ion) and Lithium-polymer (Li-poly) rechargeable batteries in the USB Charge series offer high energy density with no memory effect and minimal power loss during storage. And you can top off the battery charge at any time and always begin your adventure at maximum brightness.

SWITCH SETTINGS

Multiple switch settings (high, low and in-between) help preserve battery life and allow selection of colors and flashing options. The lock-out switches found on most of our lights keep the light from accidentally turning on in a pack or pocket. A rapid strobe setting is available on some of our lights, and it has proven useful for self-protection and for signaling during an emergency.

RED, GREEN AND BLUE LEDS

Colored LEDs help preserve night vision and are great for map reading. They are less obvious than white light to many types of game animals and they don’t interfere with night vision.

ANSI FL-1 Flashlight Performance Standards

We proudly participate in the ANSI FL-1 flashlight performance standards for measuring and stating performance claims for all portable lights. This includes brightness (lumens), distance, run time, water resistance and impact resistance. FL-1 provides the only reliable apples-to-apples comparison between models and is used by most major manufacturers. Charging times are approximate for most AC power sources. Charging times from other power sources may be significantly longer. On lights with multiple settings, the lumens, battery life and distances are stated at the highest setting (100% power), unless otherwise indicated. Weights are measured as carrying weight, including battery. Look for these FL-1 symbols on our light packaging.

FL-1 STANDARD

The output of a traditional 20-cell flashlight is approximately 15 - 20 lumens. The latest LED flashlight can claim an output of more than 3500 lumens.

Battery Life

Battery life (run time) is defined as the time elapsed from when the batteries are new to when the light reaches 10% of the original brightness.

Maximum Distance

Maximum distance is calculated as the distance from the light source to where it diminishes to 0.25 lux — about the brightness of the full moon on a clear night.

Water Resistance

Water resistance (FL-1 Standard IPX4) is tested by spraying water onto the light from multiple directions. This simulates a heavy, all-day rain.

Waterproof and Submersible

Waterproof and submersible (FL-1 Standard IPX7) assures water cannot get inside the light. This test is conducted for 30 minutes at a water depth of 1 meter (about 39”).

Impact Resistance

Impact resistance (FL-1 Standard 1M) measures how well the light resists damage when dropped repeatedly from a height of 1 meter (about 39”) onto concrete.

Features and Benefits

Multi-Mode Operation

• Many of our lights offer a choice of continuous full output, continuous low output and a rapid strobe mode.

• Many models also offer multi-color LEDs for specialized tasks, to extend run times, prevent spooking game animals and preserve night vision.

Push-Button Tailcap Switch

• The multi-mode, push-push button tailcap switch allows partial depression, giving you a quick flash for search or identification, plus a full depression to turn on a continuous beam for task illumination.

• The textured rubber-covered switch prevents finger slippage during activation.

• The rotating lock-out tailcap prevents accidental activation in a pocket or pack, and a quick twist enables the light.

Wide-Angle Technology

• This latest LED technology creates a clear, soft, ultra-intense wide-angle beam to span the shadows, making it the perfect choice for close-distance task lighting or working around your vehicle, home or campsite at night.

BUILT-IN USB CHARGERS

• All 20 of our USB charge lights are equipped with built-in chargers, either in the light or in the battery. To top off the battery you simply plug your light into a USB port, just like you do with your mobile phone or tablet.

• The indicator light monitors your battery status — red for charging, green for fully charged, and several models have a yellow indicator to remind you it’s time to recharge.

• There are 12 of our USB charge lights designed to run on standard AA, C, D or CR123A batteries or on USB rechargeable batteries.

FL-1 1-METER WATERPROOF CERTIFICATION

• The majority of our lights are certified to meet the latest ANSI FL-1 Flashlight Performance Standards to operate after being submerged 1 meter (about 39”) of water for 30 minutes. It can be a real lifesaver in a water survival situation or even if you just leave your spotlight in the duck boat for the winter.
Selecting the Right Browning Lighting

When it comes to portable battery-powered lighting for hunters and shooters the brightest solutions come from Browning. With plenty of choices in our product line you’ll find a light that’s ideal for every need.

SIZE, WEIGHT AND POWER

When choosing a light, smaller, brighter and lighter are better. Today’s high-output LEDs are so powerful and efficient they achieve the same light output as the old multi-cell C and D lights. The Trak USB keychain light is no bigger than a magnesium pistol cartridge, yet it shines with a powerful 121 lumen.

LED VS. XENON BULBS

LEDs are preferred over traditional Xenon bulbs for most uses, thus all of our lights are now LED designs. LEDs use batteries more efficiently, illuminate at greater distances, emit a clean, even beam and will never burn out under normal use. Like most technology, LEDs keep getting better every year. For 2019 several of our lights offer upgraded LEDs with 15% - 100% more output.

HAND HELD OR HANDS FREE

Headlamps and cap lights allow the use of both hands for basic like dressing a deer, fixing a truck or finding a trail in the woods. Modern technology makes many headlamps as powerful as larger hand-held flashlights. The Blackout 6V headlamp puts out 860 lumens and is brighter than at all three of our Browning hand-held flashlights.

LONG RUN TIME

By using advanced digital circuitry, highly efficient LEDs and low-resistance switches, we are able to offer extra long run times on many lights. Many flashlights and headlamps will run for 20-48 hours on the low setting. The High Noon 3C spotlight will run for 4 days at the low setting. These extended run times could be the difference between getting home safely or spending a night in the woods.

WATERPROOF AND SUBMERSIBLE

Because the great outdoors doesn’t always have great weather, we have redesigned most lights to be waterproof and submersible to 3 feet for 30 minutes (ANSI IPX7). Most of our other lights are O-ring sealed for greater water resistance (IPX4). The High Noon LED spotlight is submersible and 6 foals.

BATTERIES

Lithium batteries are used in many of our highest-performing lights, such as the Kixxis, Ruckus lantern and High Noon Rechargeable spotlight. Lithium batteries pack twice the power of alkaline batteries for their weight, and operate well at very cold temperatures. Other lights in the use AA and AAA alkaline batteries because they cool less than lithium and are readily available anywhere in the world. The latest Lithium-ion (Li-ion) and Lithium-polymer (Li-poly) rechargeable batteries in the USB Charge series offer high energy density with no memory effect and minimal power loss during storage. And you can top off the battery charge at any time and always begin your adventure at maximum brightness.

SWITCH SETTINGS

Multiple switch settings (high, low and in-between) help preserve battery life and allow selection of colors and flashing options. The lock-out switches found on most of our lights keep the light off accidentally turning on in a pack or pocket. A rapid strobe setting is available on some of our lights, and it has proven useful for self-protection and for signaling during an emergency.

RED, GREEN AND BLUE LEDS

Colored LEDs help preserve night vision and are great for map reading. They are less obvious than white light to many types of game animals and they don’t interfere with night vision.

ANSI FL-1 FLASHLIGHT PERFORMANCE STANDARDS

We proudly participate in the ANSI FL-1 flashlight performance standards for measuring and stating performance claims for all portable lights. This includes brightness (lumens), distance, run time, water resistance and impact resistance. FL-1 provides the only reliable apples-to-apples comparison between models and is used by most major manufacturers. Charging times are approximate for most AC power sources. Charging times from other power sources may be significantly longer. On lights with multiple settings, the lumen, battery life and distances are stated at the highest setting (100% power), unless otherwise indicated. Colors are measured as carrying weight, including battery. Look for these FL-1 symbols on our light packaging.

LUMENS – BRIGHTNESS

The output of a traditional 20-cell flashlight is approximately 15 – 20 lumens. The latest LED flashlights can output an amount of more than 3500 lumens.

MAXIMUM DISTANCE

Maximum distance is calculated as the distance from the light source to where it decreases to 0.25 lux — about the brightness of the full moon on a clear night.

WATER RESISTANCE

Water resistance (FL-1 Standard IPX4) is tested by spraying water onto the light from multiple directions. This simulates a heavy, all-day rain.

WATERPROOF AND SUBMERSIBLE

Waterproof and submersible (FL-1 Standard IPX7) assures water cannot get inside the light. This test is conducted for 30 minutes at a water depth of 1 meter (about 39”).

IMPACT RESISTANCE

Impact resistance (FL-1 Standard 1M) measures how well the light resists damage when dropped repeatedly from a height of 1 meter (about 39”) onto concrete.

Features and Benefits

MULTI-MODE OPERATION

• Many of our lights offer a choice of continuous full output, continuous low output and a rapid strobe mode.
• Many models also offer multi-color LEDs for specialized tasks, to extend run times, prevent spooking game animals and preserve night vision.

PUSH-BUTTON TAILCAP SWITCH

The multi-mode, push-button tailcap switch allows partial depression, giving you a quick flash for search or identification, plus a full depression 11/4 to provide a continuous beam for task illumination.

The textured rubber-covered switch prevents finger slippage during activation.

The rotating lock-out tailcap prevents accidental activation in a pocket or pack, and a quick twist enables the light.

WIDE-ANGLE TECHNOLOGY

• This latest LED technology creates a clear, soft, ultra-intense wide-angle beam to open up the shadows, making it the perfect choice for close-distance task lighting or working around your vehicle, home or campsite at night.

BATTERY LIFE

Battery life (run time) is defined as the time elapsed when the batteries are new to when the light reaches 10% of the original brightness.

BUILT-IN USB CHARGERS

• All 20 of our USB charge lights are equipped with built-in chargers, either in the light or in a power station. To top off the battery you simply plug your light into a USB port, just like you do with your mobile phone or tablet.

The indicator light monitors your battery status — red for charging, green for fully charged, and several models have a yellow indicator to remind you it’s time to recharge.

ALL-WATER SEALS ON USB PORTS

• The flexible rubber seals on USB charging ports help keep moisture out of your Browning light or power station, preventing damage from rain, snow or unexpected splashing.

FL-1 METER WATERPROOF CERTIFICATION

The majority of our lights are certified to meet the latest ANSI FL-1 Flashlight Performance Standards to operate after being submerged in 1 meter (about 39”) of water for 30 minutes. It can be a real lifesaver in a water survival situation (or even if you just leave your spotlight in the duck boat for the winter).

WATERPROOF CERTIFICATION

• There are 12 of our USB charge lights designed to run on standard AA, C, D or CR123A batteries or on USB rechargeable batteries.

**HIGH NOON PRO 1000 USB RECHARGEABLE WITH POWER BANK**

- **Beam Distance**: 14-1000 yds
- **Lumens Range**: 37-1900
- **Waterproof/Floating**: 3 feet/30 mins
- **Run Time**: 2-24 hrs
- **Impact Resistant**: 1 meter

**USB Charge**
Recharge internal battery from power source via USB cable provided

**Power Bank**
Draw power from the internal battery to charge other USB devices

**Dual Fuel**
Use the internal Li-polymer battery or a CR123A battery for back-up

- Modes: Long distance, wide angle, long distance plus wide angle, low or flashing
- Battery: 5000 mAh
- Li-polymer (included) with color-coded charging and power-remaining indicator
- Wide-Angle Technology offers an ultra-intense wide angle beam
- Includes: Lanyard and one CR123A battery

**HIGH NOON PRO USB RECHARGEABLE WITH POWER BANK**

- **Beam Distance**: 110-600 yds
- **Lumens Range**: 87-1900
- **Waterproof/Floating**: 3 feet/30 mins
- **Run Time**: 4-36 hrs
- **Impact Resistant**: 1 meter

**USB Charge**
Recharge internal battery from power source via USB cable provided
